SUMMARY

Highly motivated, self-taught AI Systems Builder & Flow Engineer specializing in LLM orchestration, agentic frameworks, and end-to-end SaaS deployments. With a proven track record of independently developing and deploying real-world solutions, I bypass tutorial hell by natively building, shipping, and monetizing production applications entirely from scratch. Expert at engineering full-stack architectures—from integrating Supabase auth and Razorpay checkout pipelines to orchestrating advanced n8n workflows across Cloudflare, Netlify, Vercel, and custom VPS environments. Eager to leverage advanced tools, strategic planning, and no-code/low-code frameworks to maximize operational throughput.

TECHNICAL & PROFESSIONAL SKILLS

- **AI & Agentic Frameworks:** Hermes Agent, Antigravity, OpenClaw, Prompt Engineering, RAG Systems, Model Context Protocol (MCP)
- **Workflow & Automation:** n8n, Process/Workflow Automation, Headless Browser Automations, API & Webhook Integrations, RPA
- **Cloud & Deployments:** Cloudflare Workers, Vercel, Netlify, Hostinger Linux VPS, Docker, Traefik, CI/CD Pipelines
- **BaaS, Auth & Payments:** Supabase (PostgreSQL, Google Configuration/SSO, RLS), Razorpay API (Real-world monetization), Odoo ERP
- **Development Stack:** Python, Next.js, WebGL, Electron.js, Node.js, Shell Scripting, Git, No-Code/Low-Code platforms
- **Professional Competencies:** Strategic Planning, AI Solution Validation, Automation Testing, Performance Optimization, Project Management

PROFESSIONAL EXPERIENCE

AI Developer & SaaS Entrepreneur (Freelance) | Indore & Raipur, India | July 2025 – Present

- Architected and implemented robust AI automation workflows utilizing n8n and Custom MCPs, integrating disjointed APIs and webhooks to significantly reduce manual effort by 85%.
- Developed and deployed integrated bespoke Large Language Model (LLM) infrastructures (OpenClaw, NemoClaw) to enhance data processing, accelerating content generation and intelligent routing operations.
- Orchestrated end-to-end process automation initiatives, managing hybrid hosting environments via Cloudflare, Vercel, Netlify, and custom Hostinger Linux VPS setups (with Docker & Traefik).
- Implemented rigorous Automation Testing and Performance Optimization protocols, successfully managing cloud dependencies to ensure 99.9% uptime and reliability for AI-driven systems.
- Engineered scalable backend architectures utilizing Supabase for secure user authentication, structural ID databases, and resolving complex geographic payment limitations natively using Razorpay checkouts.
- Conducted strategic AI Solution Validation for new product features, acting as the technical bridge to evaluate feasibility and actual business impact.

KEY PROJECTS & FRAMEWORKS

Universal Agent OS & DOGRAH (Voice Agent)

- Engineered a decoupled cross-platform workspace combining Next.js, Electron UI, and WebGL with a Python daemon, delivering unified agentic capabilities via persistent Obsidian memory.
- Programmed DOGRAH as an in-house multimodal AI voice agent integrating advanced NLP and text-to-speech APIs, drastically reducing system latency for real-time user interaction.

Autonomous Job Application Pipeline & Primuez Guard

- Built an intelligent dual-cron architecture that autonomously scrapes job boards and generates bespoke, ATS-optimized PDF resumes via ReportLab, utilizing dev-browser flows to expand application pipelines 10x.
- Developed Primuez Guard, a security-monitoring autonomous agent designed to actively analyze and maintain dynamic ecosystem health across deployed VPS environments.

InkTwin (*inktwin.primuez.in*)

- Developed and deployed a fully functional AI-powered SaaS product designed to automate content creation and digital marketing workflows for small businesses.
- Leveraged deep LLM and API orchestration alongside Supabase and Razorpay to monetize natively, enabling rapid iteration and seamless feature deployment based on immediate user feedback.

PrimuezSure (*primuezsurre.primuez.in*)

- Created an autonomous AI insurance advisor utilizing RAG principles to ingest unstructured policies, simplifying complex documentation for instant user query resolution.
- Designed as an interactive SaaS automation tool to empower individuals to make data-driven insurance decisions effortlessly.

EDUCATION, CERTIFICATIONS & LANGUAGES

- **Bachelor of Computer Applications (BCA)** — Shri Shankaracharya Institute of Professional Studies (Pursuing)
- **Secondary Education (Completed)** — KPS, Dunda
- **n8n Certified Professional** — Official badge holder of all available n8n platform certifications.
- **SimpliLearn Certified** — Official n8n Automation Completion credential.
- **Languages:** Hindi (Native), English (C2 Proficient), Sindhi (C2 Proficient)
